SMART SK: A WEB BASED PROJECT MONITORING SYSTEM WITH BUDGET FORECASTING AND PREDICTIVE PROJECT ANALYSIS FOR SANGGUNIANG KABATAAN OF DISTRICT 5 QUEZON CITY

BONTUYAN, JEFF ALDREICH S.

PROJECT MANAGER

DE GUZMAN, LUIS ALBERT A.

LEAD PROGRAMMER

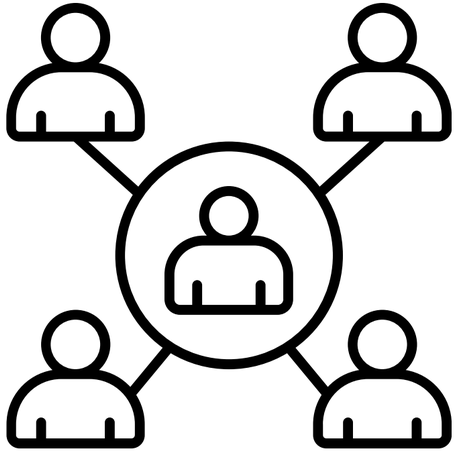
BALAGTAS, REIGN KERSTINE A

SYSTEM ANALYST

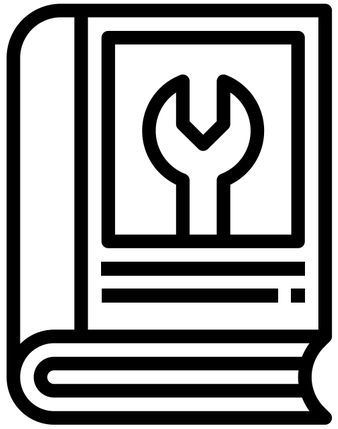
ANDO, YASMIEN M.

QUALITY ASSURANCE

PROJECT CONTEXT



SK plays a key role in youth development.



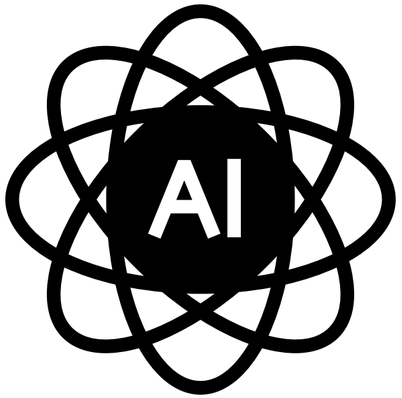
Current SK processes are manual, inefficient, and unaccountable.

PROJECT CONTEXT

Problems: proposal tracking, project performance.

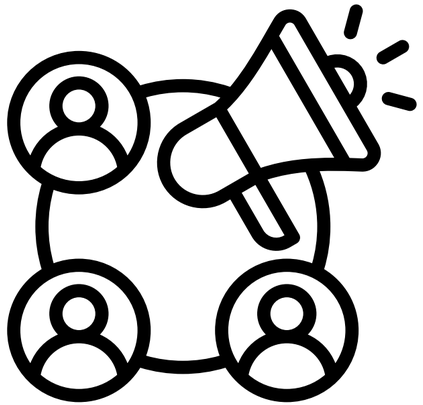
Proposed solution: Smart SK, a project monitoring system using AI forecasting and predictive project analysis.

PURPOSE OF THE PROJECT



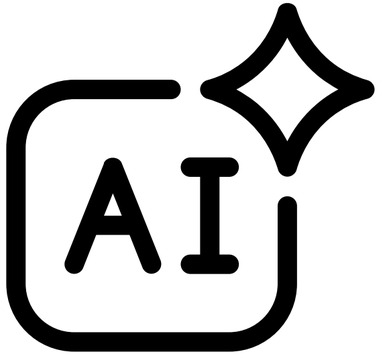
Develop a centralized, AI-powered platform

Forecast the potential budget for the projects per year

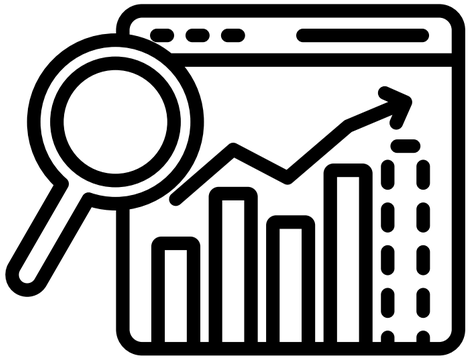


Promote collaboration across multiple barangays

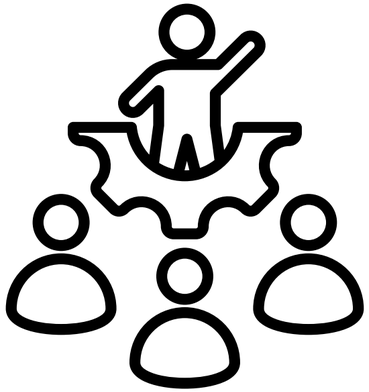
PROJECT OBJECTIVES



AI-based forecasting for budget viability



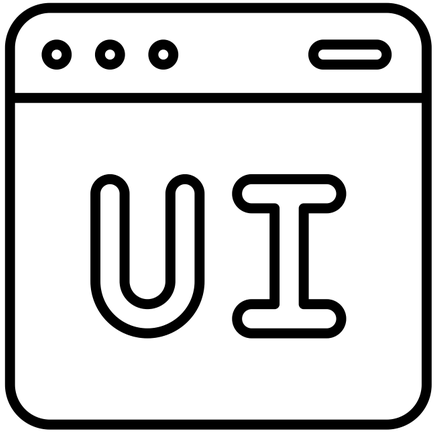
Predictive analysis based on Historical Data & Internet Sources



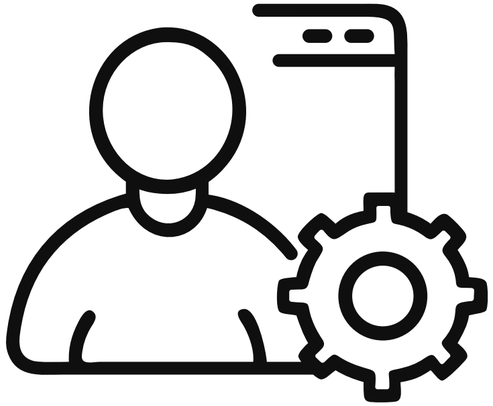
Multi-barangay system for district-wide coordination

SYSTEM FEATURES AND MODULES FRONT-END

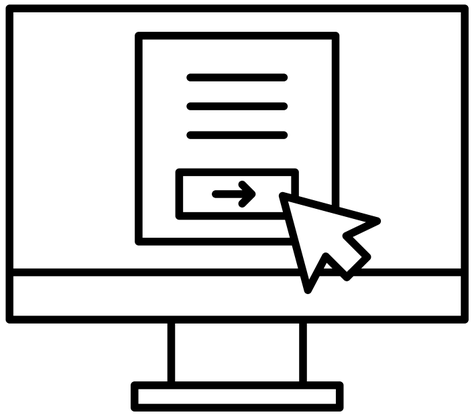
.



React + TypeScript UI



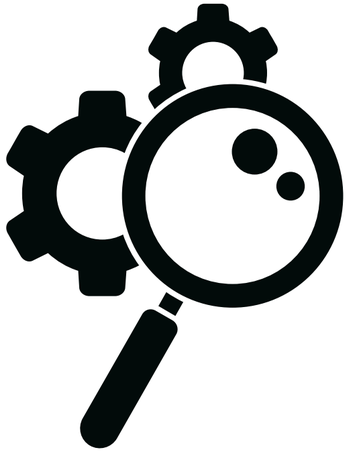
Dashboard



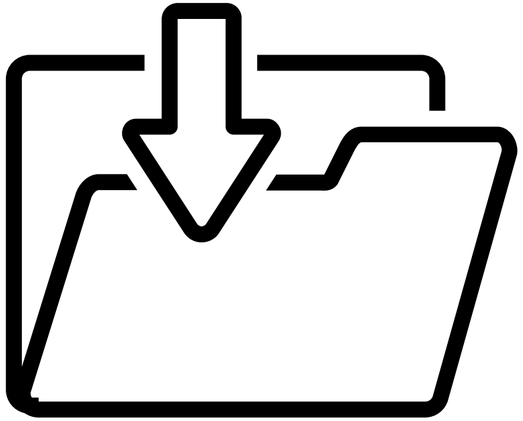
Project proposal submission and status tracking

SYSTEM FEATURES AND MODULES FRONT-END

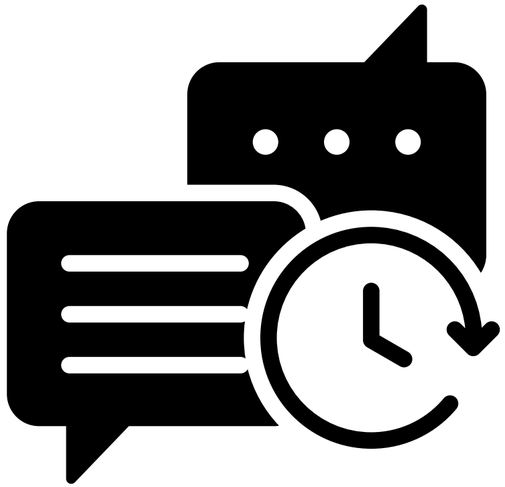
.



Barangay-specific view



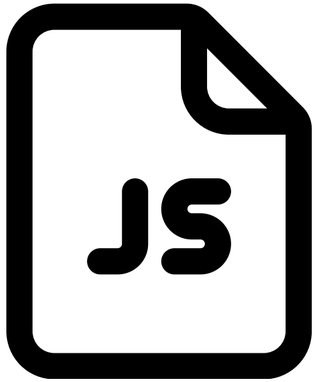
Archiving of past projects



Real-time notifications (Through Email)

BACK-END

.



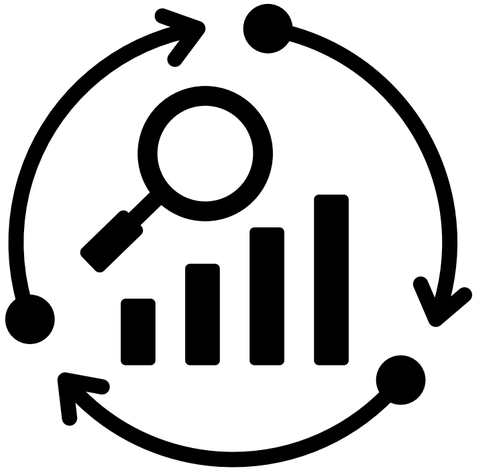
Node.js + Express.js

MSSQL for data storage

AI Forecasting & Predictive Analysis (Gemini by Google)

AI CAPABILITIES

.

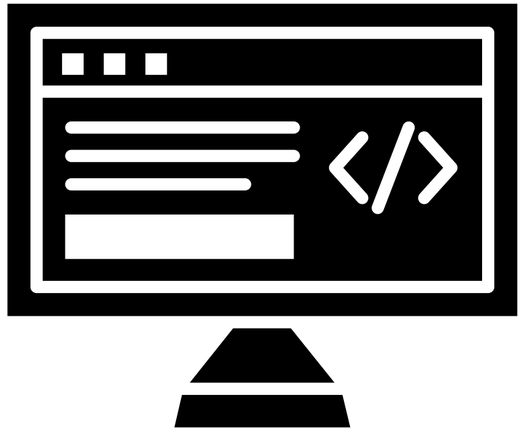


AI Forecasting: Predicts the annual budget using historical data.

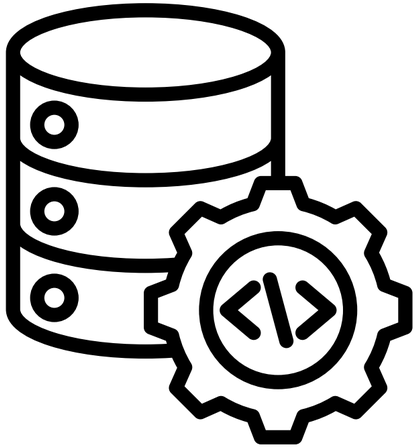
Predictive Analysis: Uses historical data & internet sources to provide feedback, suggestions, and/or recommendations for their future projects

TECHNOLOGY STACK

.



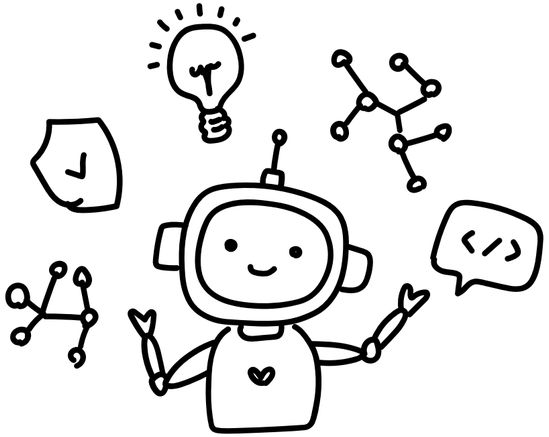
Frontend: React + Vite + TypeScript



Backend: Node.js + Express

TECHNOLOGY STACK

.

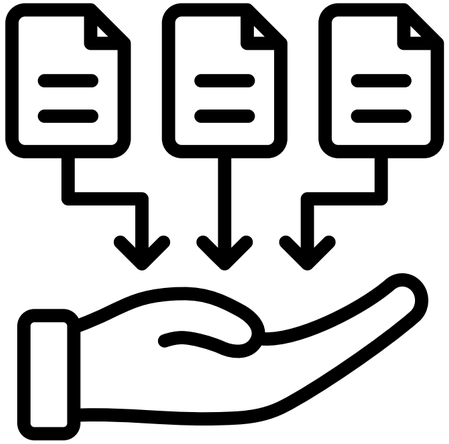


AI Tools: Python, Gemini (predictive LLM)

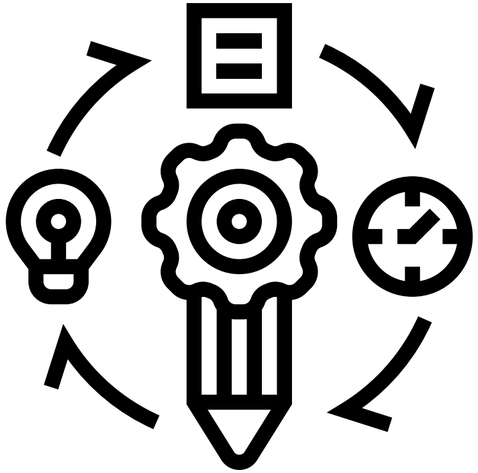
Database: Microsoft SQL Server

METHODOLOGY

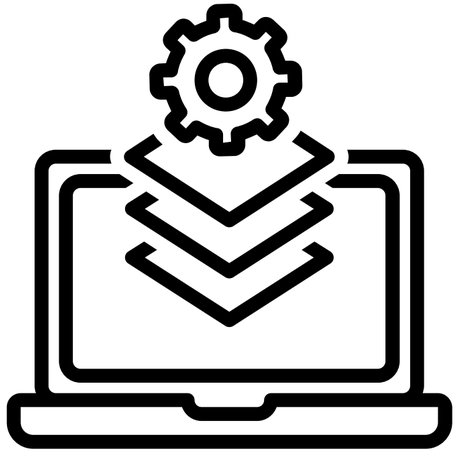
.



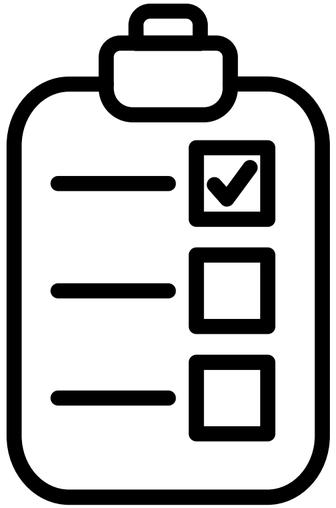
Data Gathering: Interviews, observations, document reviews



Design & Planning: Notion, Figma, whiteboards



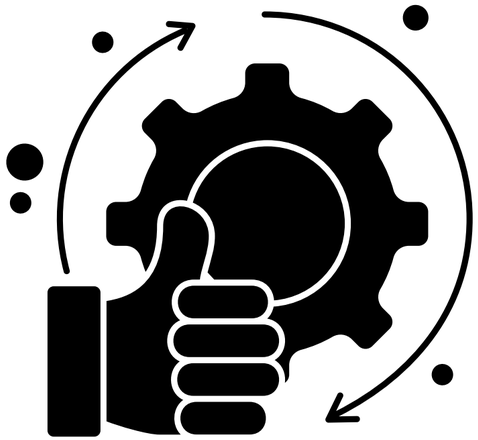
Development: Full-stack coding with modular APIs



Deployment Prep: Security, performance, scalability

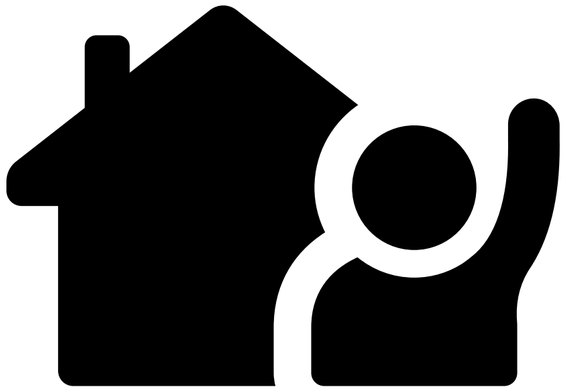
LIMITATIONS

.



Accuracy of AI depends on data quality and quantity.

Internet dependency may hinder accessibility.

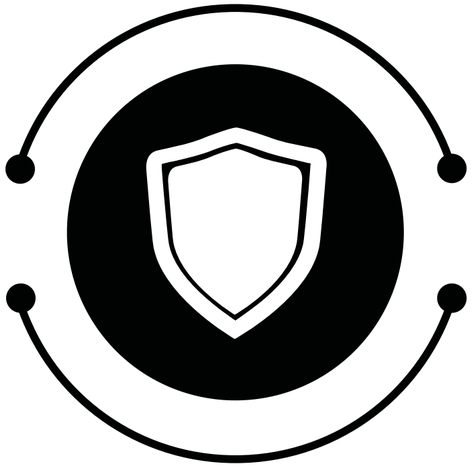


Digital literacy gap

LIMITATIONS

.

Initial manual data entry is needed.

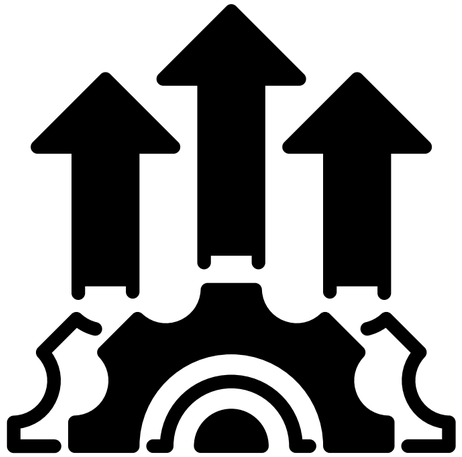


Data privacy concerns must be addressed.

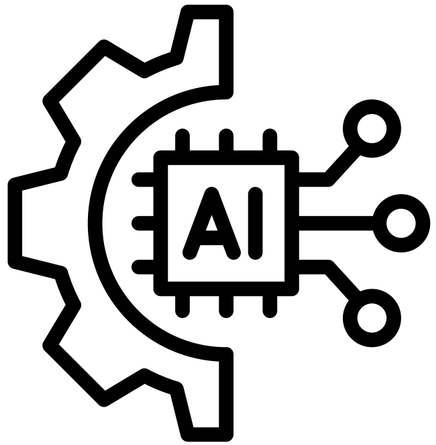
Lack of Historical Data.

REVIEW OF RELATED LITERATURE AND SYSTEMS

.



AI improves efficiency, transparency, and governance.



AI in education, health, transport, and project management shows success in forecasting and automation.

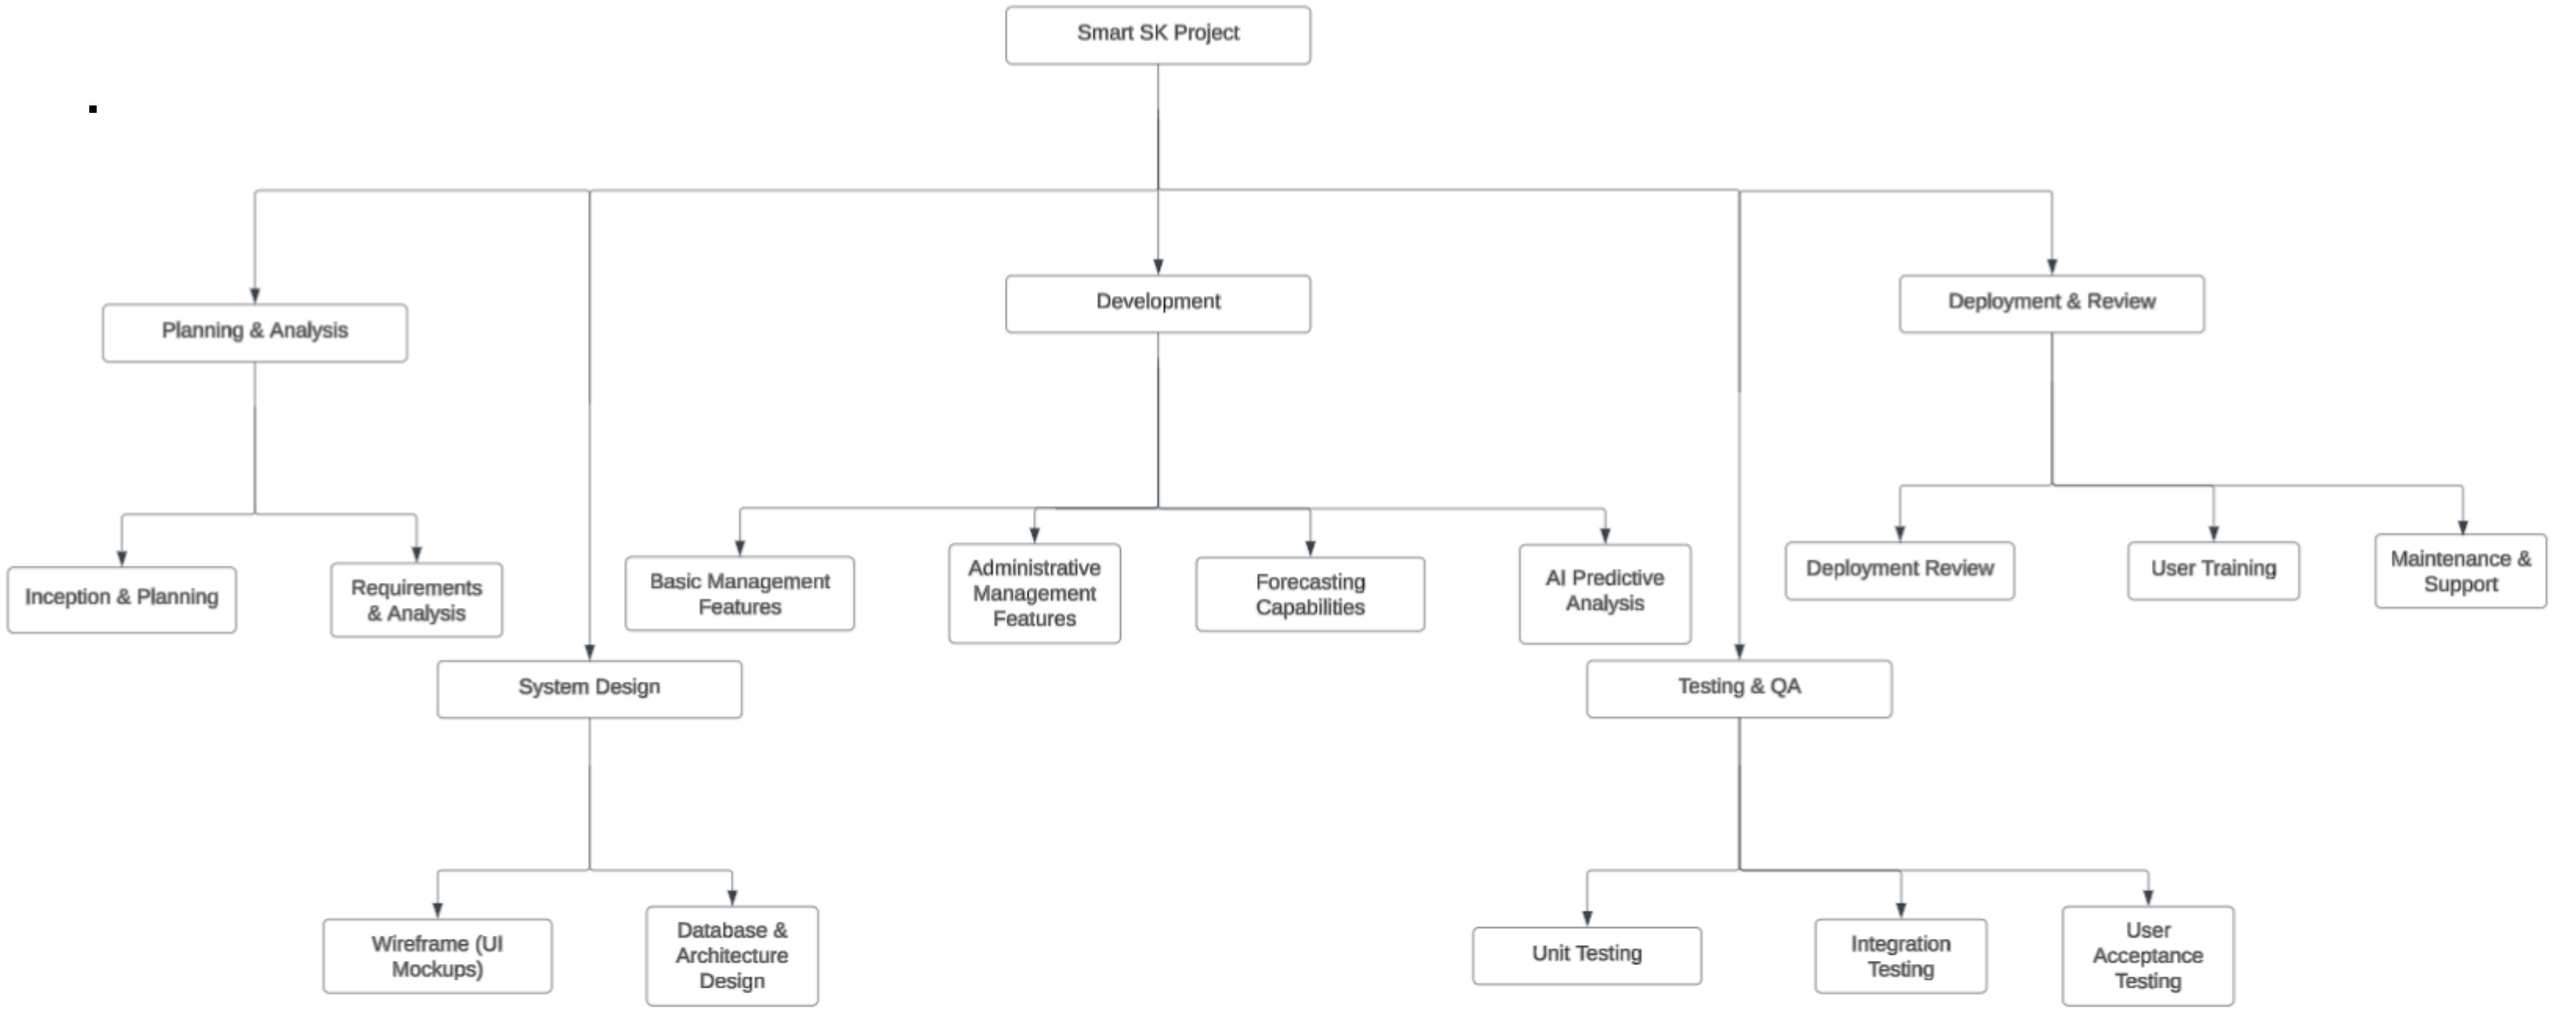
REVIEW OF RELATED LITERATURE AND SYSTEMS

.

Local systems (Barangay MIS, SK IMS) prove the viability of digitization.

Forecasting models effective for time-series and project tracking.

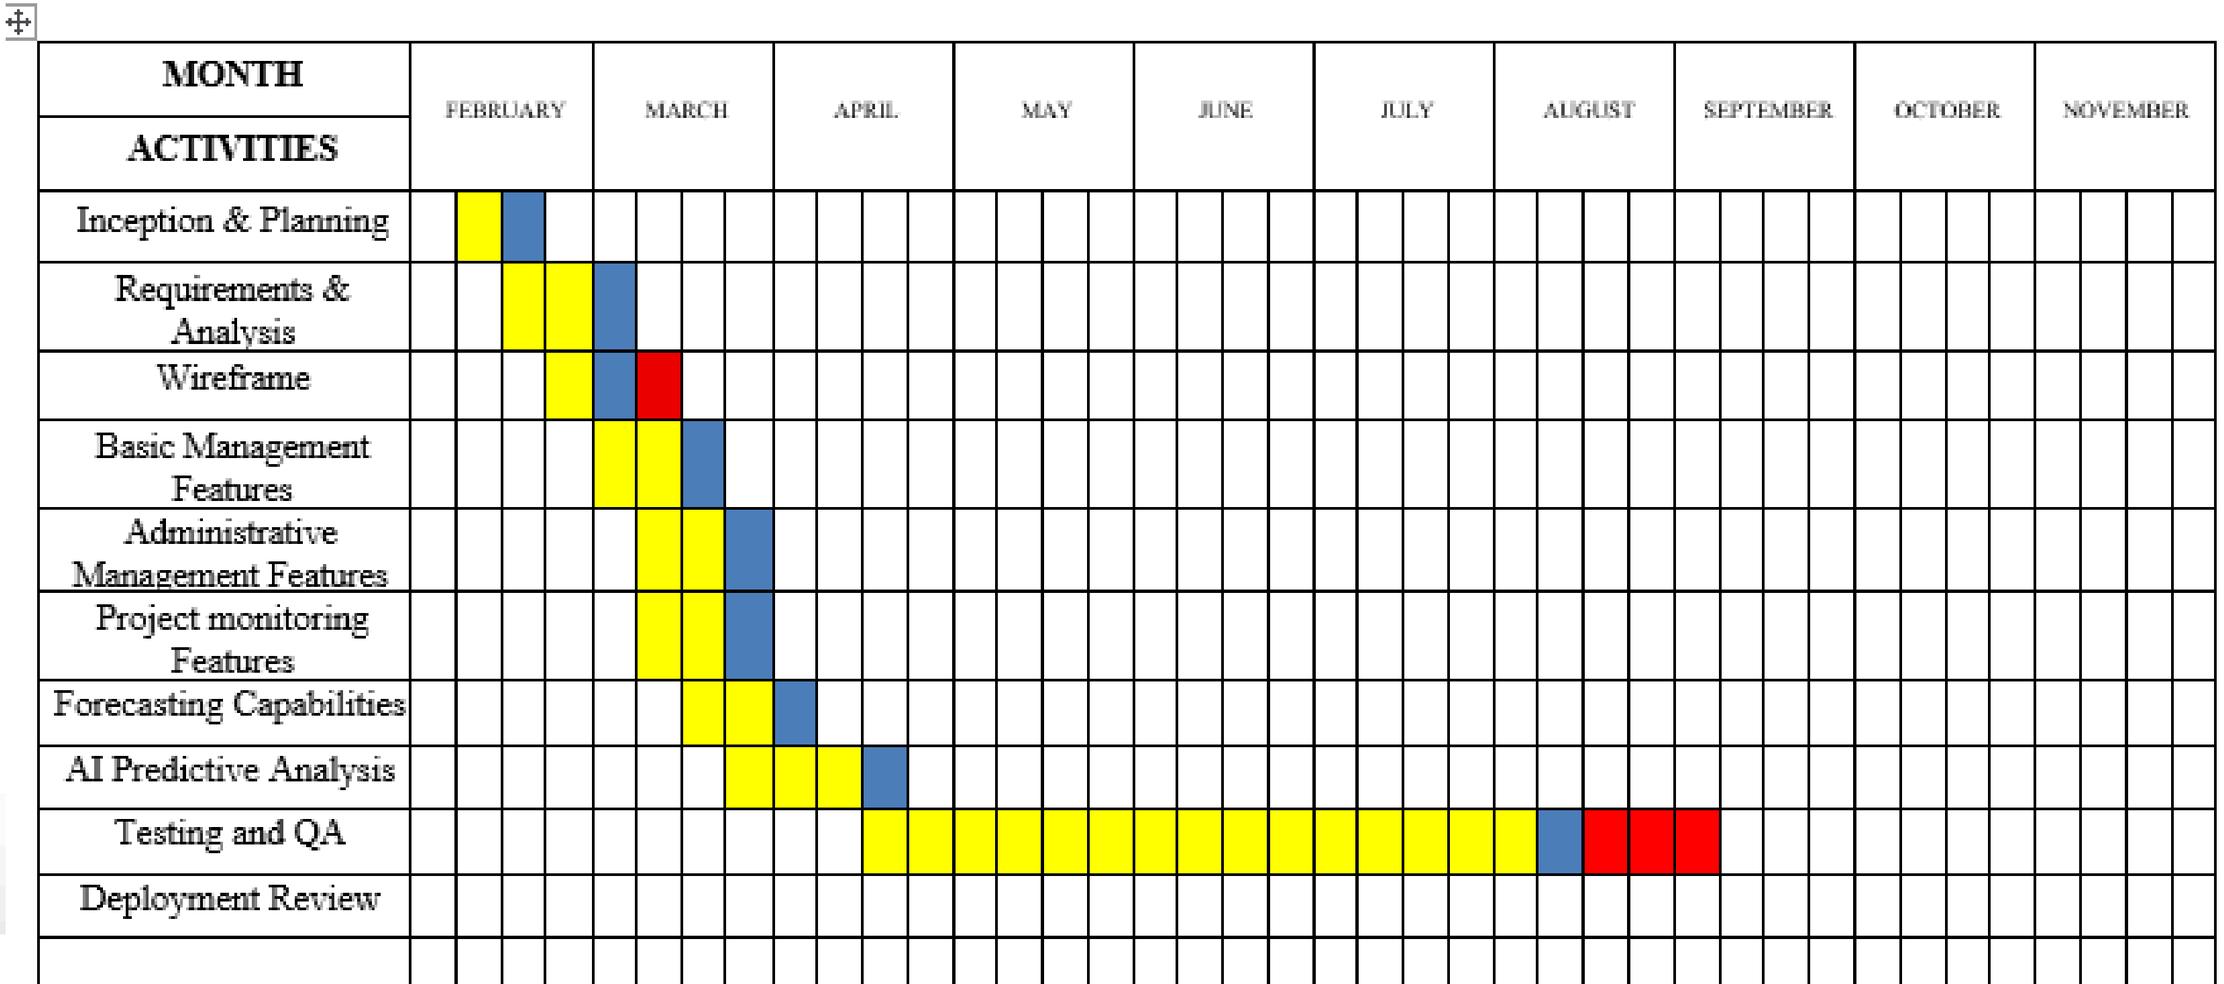
WORK BREAKDOWN DIAGRAM



GANTT CHART

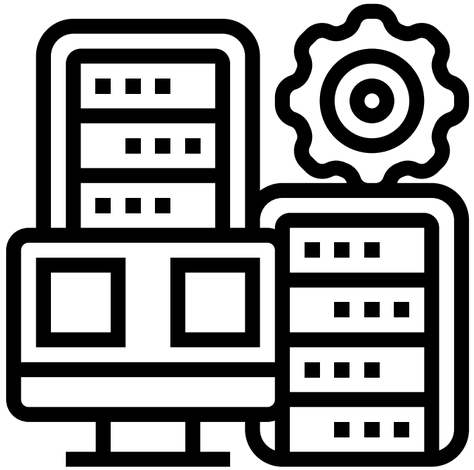
Gantt Chart of Activities

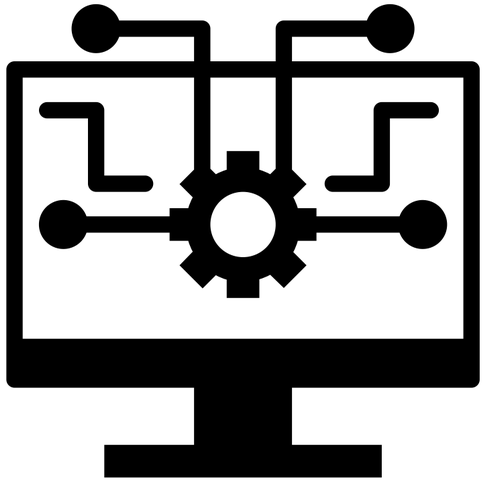
Legend: Blue - End, Yellow – Start & Red - Delay



HARDWARE & SOFTWARE RESOURCES

.



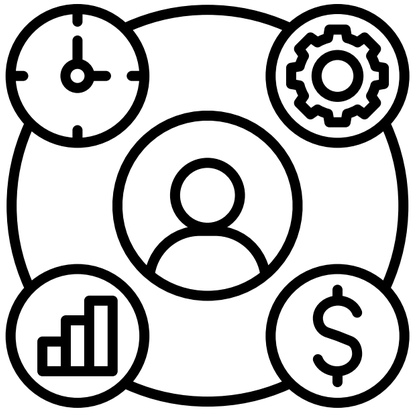


HARDWARE: Windows 11
Intel i5, 24GB RAM

SOFTWARE: VS Code, TypeScript, Node.js, Python, MSSQL, React, Express.js, Gemini

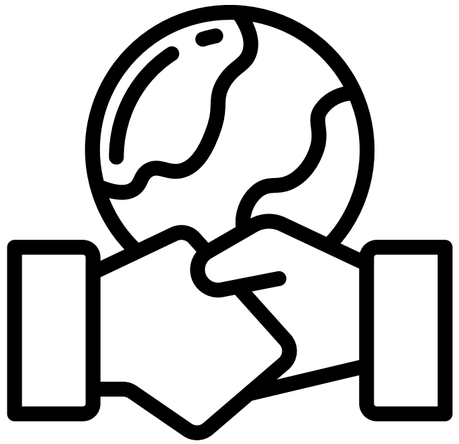
CONCLUSION

.

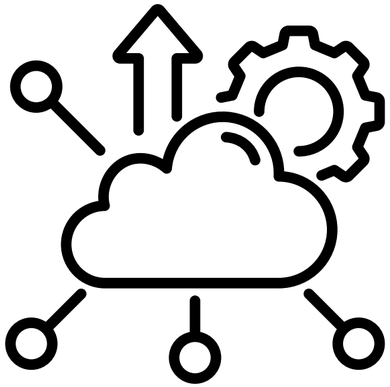


Smart SK transforms SK project monitoring with AI.

Promotes transparency and youth involvement.



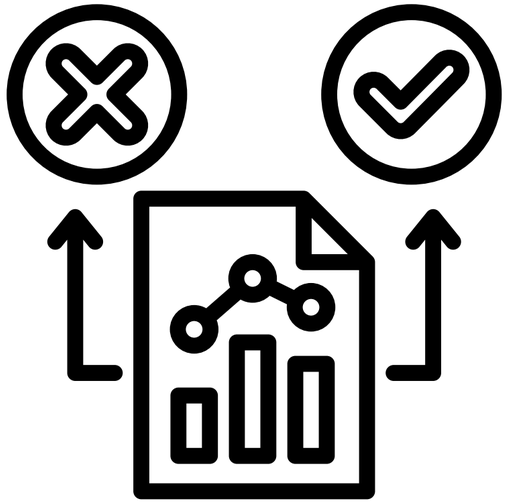
Fosters collaborative governance across barangays.



Deployment Prep: Security, performance, scalability

CONCLUSION

.



Enables data-driven decisions and resource optimization.

Long-term impact: Sustainable youth development programs.
